

AI-Driven Continuous Full-Stack Security Posture Management

VulnHero Platform brings attack-surface visibility, vulnerability & exploit intelligence, AI-driven risk scoring and exploit validation together in one place. It turns continuous full-stack testing into an exploit-aware view of your environment, so you cut scanner noise and fix what actually puts you at risk **first**.

Technical Advantages:

- **Real-time detection & response** - Threats and exploitable issues surfaces in minutes, not weeks.
- **Less manual work** - Automate up to %90 of repetitive triage and reporting.
- **Bring shadow IT control** - Reduce unmanaged and risky assets significantly in the first months.
- **Fast, low-friction rollout** - Cloud ready, agentless architecture with no complex integrations required.

Strategic Advantages:

- **Built to scale** - From single teams to global estates, the same platform grows with your footprint.
- **Designed for practitioners** - An intuitive interface that security, DevSecOps and IT teams actually use.
- **Predictable economics** - Transparent SaaS pricing with no hidden add-ons.
- **Expert support** - Direct access to security engineers for onboarding, tuning and best practice guidance.

Why VulnHero?

- **Continuous and Proactive Security Management:** Move from periodic projects to always-on visibility, validation and risk tracking.
- **AI-Powered, Exploit-Aware Insights:** Use machine learning and threat intelligence to score vulnerabilities by real-world exploitability, not just CVSS.
- **True Full-Stack Coverage:** See and test web apps, APIs, infrastructure, DNS, brand exposure and more from a single platform.
- **Seamless Integration:** Fix into existing IT and security workflows with APIs, ticketing and CI/CD integrations.

See what scanners miss - focus on exploitable risk first.

Platform Key Features

- **Centralized Dashboard**
Get an executive-ready, unified view of assets, vulnerabilities, exploitability status and remediation progress—across your entire attack surface.
- **Real-Time Exploit and Vulnerability Intelligence**
Ingest and correlate CVEs, exploits and vendor advisories in real time. Map them to your tech stack so teams see which issues are exploitable **for them**, not just in theory.
- **Extended Attack Surface Management**
Continuously discover internet-facing assets, shadow IT and unmanaged services. Maintain a live, prioritized map of where attackers can actually reach you.
- **Continuous Full-Stack Autonomous Security Testing**
Run continuous, asynchronous full-stack security tests across web, API, infrastructure and DNS layers. Built-in scanners and workflows minimize impact while maximizing coverage.
- **Exploitability Validation**
Validate selected high-risk vulnerabilities with safe, controlled exploit tests. Confirm which findings are truly exploitable and move them to the front of the queue.
- **Technology Stack Discovery**
Identify outdated or unsupported technologies, map critical dependencies and automatically highlight upgrade and patch priorities across versions and stacks.
- **Continuous Threat Exposure Monitoring**
Monitor for phishing domains, brand impersonation, data leaks and scam infrastructure. Receive exploit-aware alerts that connect external threats back to your assets.
- **Customizable Workflows and Automation**
Automate triage, routing, retesting and reporting with agentless, API-driven workflows. Reduce false positives, keep teams focused on high-impact issues and cut manual effort by up to 90%.

Add-On Services

- **PTaaS - On-Demand Penetration Testing Service**
Blend expert-led testing with VulnHero’s reconnaissance, exploit validation and reporting workflows. Validate complex attack chains, support major releases and feed verified findings back into the platform.
- **DNS Hygiene and Subdomain Takeover**
Continuously analyze DNS configurations, track risky records and uncover abandoned or misconfigured subdomains. Prevent takeover scenarios and protect brand trust with automated monitoring and alerts.

Struggling to keep up with a growing attack surface? Moving to VulnHero is the right decision.
